SUMMARY

Backend Engineer with 2+ years of production experience designing distributed systems and high-throughput microservices in fintech. Architected a Golang Loan Origination System serving 20+ NBFC clients, managing portfolios worth Rs. 500 crore, with a 62% reduction in onboarding latency. Proven ownership across API design, inter-service reliability, concurrent systems, and production incident resolution. Strong foundation in system design, data consistency, and scalable backend infrastructure.

WORK EXPERIENCE

Backend Engineer & Frontend Lead	February 2024 – Present
Kugelblitz Private Limited	
- Architected and shipped a Loan Origination System, serving 20+ NBFC clients processing 500 daily loan applications and managing client portfolios exceeding Rs. 500 crore. - Engineered KYC, credit scoring, and onboarding microservices integrating Digio, Karza, and TransUnion APIs, cutting end-to-end processing time by 62% — from 8s to under 3s. - Designed a concurrency-safe backend sustaining 100+ simultaneous requests with zero service degradation, leveraging Golang goroutines and structured resilience patterns. - Refactored REST API design and state management, reducing P95 latency by 25% under concurrent multi-tenant load across 20+ production clients. - Led a frontend team of 5 engineers via structured code reviews, task allocation, and blocker resolution, cutting the frontend bug backlog by 50% and improving sprint delivery by 30%.	

PROJECTS

Distributed Database Backup Service <i>Spring Boot, Java, Golang, SQL, Docker</i>	
- Built a distributed backup system with a Spring Boot worker pool that automatically picks up registered databases, executes scheduled backups concurrently, and stores compressed dump files with configurable retention policies. - Implemented auto-deletion, failure retry logic, and per-database scheduling across 3–10 SQL databases, reducing manual ops overhead and cutting recovery time in failure scenarios.	
Graviton — Loan Origination Platform <i>Spring Boot, MySQL</i>	
- Architected microservices for KYC verification and CIBIL credit scoring, owning the full loan lifecycle from applicant onboarding through disbursement across 20+ NBFC clients. - Hardened inter-service reliability with structured error handling, circuit breakers, and retry logic, reducing cascading failure propagation across dependent services. - Led migration of the frontend codebase from AngularJS to Angular 17, adopting standalone components, reactive forms, and lazy-loaded modules — improving load performance and eliminating a legacy dependency.	

TECHNICAL SKILLS

Languages: Golang, Java, JavaScript (ES6+), TypeScript, C/C++, SQL	
Backend: REST API Design, Microservices Architecture, Concurrent Systems, Distributed Systems, Resilience Patterns, Inter-Service Communication	
Frameworks: Spring Boot, Node.js, Express.js, React, Angular	
Databases: MySQL, MongoDB, PostgreSQL	
Tools & Infra: Docker, Git, Bitbucket	

EDUCATION

Swami Keshvanand Institute of Technology, Management and Gramothan	CGPA: 9.68
B.Tech in Computer Science with Artificial Intelligence	July 2020 – June 2024
Kendriya Vidyalaya Beawar	89.80%
Senior Secondary (Class XII)	April 2019 – March 2020
